

Heath Freel

Chief Technology Officer

Heath Freel, CTO, is a forward-thinking IT expert, anticipating new technologies and matching them to business needs and obligations. Heath has garnered a reputation as a security professional and his adeptness has enabled him to evaluate the right products for the right solutions. His focus on product testing, market trends and adoption has streamlined go-to-market strategies.

Heath brings 20 years of IT and Engineering experience to his role and is responsible for the organization's technological roadmap. He has a significant role in supporting all research, product development, design and consulting initiatives.

Under his leadership, he has led the development of End to End Networks' Award Winning client management portal, eView™, and fosters new emerging technologies for business growth. Heath continues to introduce new leading edge architecture plans for many Enterprise clients with complex networks who are in need of advanced security and compliance.

Heath is one of five members at End to End Networks who jointly led the company in 1993. Previously, he played a role in taking ownership for technical support and sales engineering. To stay competitive, he continuously maintains his certifications and training including Cisco and Juniper. Heath has instilled standards of excellence throughout End to End Networks' team of Security Engineers and System Developers, who have also received industry recognition for their achievements.
