

Smart Managed *IT* Solutions *transforming your business*

Mobile Workforce

Business Challenges

Prospective employees are now searching for jobs that allow for flexible hours and provide multiple options to work effectively and efficiently. Companies are realizing that a mobile workforce strategy promotes a healthy work environment, increases employee productivity, and reduces corporate carbon footprints.

The challenges, however, are the ability to connect to resources from anywhere at any time, effectively monitoring productivity, and maintaining a collaborative atmosphere for virtual teams.

Our Mobile Workforce service enables companies to have the flexibility to work beyond the office perimeters and outside of business hours, while simultaneously increasing productivity.

Our Mobile Workforce Solution

Our Mobile Workforce solution has been designed to create a seamless "out of office" work experience for employees, managers, and executives. The corporate workspace can now

be extended beyond the walls of the office, whereby a secure connection can be made to critical corporate resources and applications, using any device, at any time, from anywhere.

Our Services

- Network Management
- Security Management
- Unified Communications
- Consulting
- Wireless Solutions
- Mobile Workforce Solutions
- Governance, Risk & Compliance
- Professional Services

eView, Our Award Winning Portal

eView is a sophisticated web-based client management portal that provides companies with a single point of entry to crucial information about their corporate IT assets. Companies can manage IT costs by using eView as a central repository to track IT assets, data telecommunications information, and manufacturer hardware and software maintenance contracts.

Retrieve your corporate information and applications outside of the office

Providing your mobile workers with tools and appropriate access to corporate resources can be a challenge. It requires an evaluation of control access to the network and a secure remote connection. The greatest challenge is monitoring performance and productivity. While your employees are not in the office to be evaluated, companies are still able to measure productivity through remote access reporting.

Enhance collaboration and personalize your service

Technology enables companies to reduce their carbon footprint and traveling costs by giving companies the ability to collaborate virtually. Staff can interact with one another and their customers or partners via video conferencing or secure web conferencing tools. These capabilities increase productivity, provide a competitive advantage, reduce cost, and personalize the service you offer.

Increase productivity by monitoring web access

Employee productivity drives corporate revenue and sustainability. As social networking becomes prevalent, companies struggle to find a balance within their workplace. URL and content filtering apply to mobile workers as well and can be activated to reduce the chances of inappropriate usage or virus infections.

Out-of-Office

making it secure, seamless, and stress-free

Our Mobile Workforce Solution

Our Mobile Workforce Solution enables staff, managers, and executives to connect, communicate, and collaborate from anywhere, at any time, while using any device.

7x24x365 Secure Connectivity to corporate information which simulates an in-the-office work experience.

Web and Video Conferencing enables communication and collaboration capabilities between virtual teams by sharing applications in real-time.

Client Policy Enforcement checks remote user machines prior to remote access connectivity to ensure virus and software definitions are up to date and in line with corporate compliance policies.

Remote Access Accounting tracks remote user connections and length of connections when acquiring access to the corporate network for auditing and cost allocation.

Network Access Control focuses on three key things: who, what, and where. IT policies can be evaluated to identify which staff members would have access, from where and which devices have permissible entry to the network.

URL Filtering helps to restrict access to websites containing

spyware and malware or browsing inappropriate websites. It also limits instant messaging, social networking, personal email websites, or video streaming to adhere to the corporate policy standards.

Value-Added Benefits

As an End to End Networks client, you will receive value-added benefits such as:

- 7x24x365 access to our Live Voice Service Desk
- Access to our award winning portal, eView
- Remote access device report
- Simulated in-the-office experience
- Securely connect to web enabled applications
- Mean Time to Repair (MTTR) for managed service products within 4 hours
- Complete visibility into managed device asset information
- Tracking of all manufacturer warranty of contracted devices in one interface
- Real-time connectivity experience
- Remote access capabilities integrate with Windows, MAC, Linux, and Mobile OS environments

According to an IDC study...

By 2013, the mobile worker population will represent about 35% of the worldwide population. Do you have your mobility strategy?
