Job Profile – Junior C#, ASP.NET, SQL Developer

Title
Junior Software Developer

Reports To
Manager, PMO & IT Operations

Description

We are looking for a C# and ASP.NET developer who will be able to hit the ground running. You will be primarily responsible for **developing and supporting a network management platform that includes web applications, services and third party API integration tools.** In addition, strong knowledge and hands-on experience with SQL is required as your responsibilities will also include **SQL development and maintenance, such as designing and implementing new tables and stored procedures, and analyzing and enhancing performance of existing ones.**

You will be working as a member of a small team of developers in a fast-paced, agile environment. Therefore a commitment to teamwork, **creative problem solving**, fast thinking on your feet and ability to **juggle several projects** at once are essential. We welcome and encourage out-of-the-box thinking and contribution of fresh and creative ideas.

Primary Responsibilities
- Support and extend existing applications with new and enhanced functionality
- Design, build and maintain efficient, reusable and reliable C# code
- Identify performance and usability issues, and devise solutions to these problems
- Develop and implement tools that integrate with third-party APIs
- Build web-based applications using ASP.NET, HTML and JavaScript
- Tackle problems out of your comfort zone and help out fellow developers
- Be proactive in looking for ways to improve the product and suggest new ideas
- Identify scope, effort and time required to complete various development tasks
- Participate in design and review meetings to decide on the future of the product

Required Skills
- Extensive experience with C# and .NET
- Experience writing SQL stored procedures, and designing and building databases
- Thorough understanding of object oriented programming
- Firm grasp of multi-threaded programming, as well as network programming
- Experience writing code that interacts with third party APIs
- Ability to create and maintain Windows services
- Hands-on experience with debugging and error handling large applications
- Experience with Visual Studio 2015/2017, including setting up and managing projects
- Experience with SQL Server 2012/2014, including SQL Management Studio

Preferred Skills
- ASP.NET Web Forms
- ASP.NET MVC
- IP Networking
- SNMP
- JavaScript and jQuery
- Ajax / XHR
- Local storage
- Web workers
- HTML5
- CSS3

Competencies
- Fast and Creative Thinking
- Team Spirit and Empathy
- Passion for Excellence & Integrity
- Tenacity & Resilience

Education
- Bachelor/Diploma in Computer Science, or equivalent education in related field

Remuneration
- This position is provided with salary and benefits as governed by the Performance Management process.

We thank all applicants for their interest; however only candidates under consideration will be contacted.
